

P2PS tokens have a high potential growth trajectory through the ELI and ISI group clients alone.

Economic Value Integrated into Secure Communication System

THE PROBLEM

Anything that you exchange digitally with anyone, anywhere, is not private by any privacy standards; including information exchanged on your so called "private" intranet corporate networks.

THE P2PS SOLUTION

P2PS is the world's first blockchainpowered, secure, pure peer-to-peer, interference-free digital communication platform designed for everyone with a need to securely store and exchange digital data such as private data, medical records, banking data and government classified data, among other sensitive digital exchanges. Such platforms today are simply nonexistent.

P2PS

MISSION

P2P Solutions Foundation enjoys a shared mission with ELI and ISI of being committed to effectively and consistently deliver world class, high quality, outstanding products, applications and services to its client's at the most cost effective and reasonable price. Together, we anticipate meeting customer expectations by understanding client requirements, keeping pace with latest innovations through research and by engaging in sustainable best practices.

VISION

P2PSF endeavors to attain the individual and collective goals by:

- § Cultivating partnership relationships with all stakeholders and clients, instead of being mere supplier or service provider;
- § Motivating team members through incentives and reward programs, in addition to treating them as partners thereby bringing out the best in them, resulting in maintaining service excellence;
- § Advancement of goals to enrich community and preserve the client confidentiality ecosystem.

FUNDAMENTAL TECHNOLOGY

will focus on providing:

- A) Transactions that facilitate centralized digital services utilizing P2PS at peer-to-peer platform level;
- B) Decentralized service for P2PS users. A set of tools aimed at lowering the barriers to embracing and integrating with the P2PS system for all stakeholders;
- C) Implementing an efficient P2PS Rewards System.

What is P2PS Token?

P2PS CRYPTO TOKEN

is a gateway to all your transactions on the decentralized, secure and interference-free, Peer-to-Peer Communication System platforms used in Government & Defense, Digital Education & Delivery, Medical & Pharma, Banking & Finance, and other corporate sectors.

P2PS

is a utility token built on a strong foundation based on proven business practices and proven fundamentals. P2PS is part of a new economic ecosystem, the settlement layer of which is built on the general public Ethereum network on which the users interact.

P2PS TOKEN

is crucial for real-world transactions and would eventually be needed by anyone desiring to use any offerings of all providers, registered on the P2PS ecosystem. The P2PS token would naturally become the only means of acquiring products and services from all merchants within the P2PS ecosystem.

Why Buy P2PS Tokens

When you purchase P2PS Tokens, you are contributing directly into the new economy that has been designed for your benefit. Please be advised that you are neither investing in a company nor in the creation of a company or corporation. We have crossed those stages and are offering P2PS utility token that you will eventually need if you prefer to use our secure, interference-free communications platform.

Procuring P2PS Tokens helps grow the economic ecosystem built around the secure, peer-topeer, interference-free communications platform. You are helping build an extremely secure and strong network of interference-free communication systems with faster processing and a perpetual record of transactions. This process also streamlines financial actions into efficient and highly secure processes.

The volume of purchases of P2PS Tokens has a direct effect on the transaction volume accommodated by the ecosystem. Eventually more online merchants would be attracted to use the P2PS ecosystem as the value of all circulating P2PS Tokens increases; which resultantly will present more options for P2PS Token holders to purchase a larger variety of products and services as we diversify.

The P2PS is a Utility Token for Merchants, Participants and Developers to Access, Use and Further Develop the Secure, Interference-Free Platform.

Merchants

Merchants providing digital services, such as banking institutions, will pay a decent fee to use the secure and interference-free, Peer-to-Peer Communication
System platform.

Participants

Participants shall buy the P2PS tokens in place of a traditional license for use on the Secure, Interference Free platform. The P2PS token allows the participants to also hold the P2PS tokens for better monetary gains since the P2PS tokens value would inevitably increase with the increase in volumes.

Developers

The developers will receive P2PS Tokens to persistently develop and advance the secure and interference-free, Peer-to-Peer Communication System platform and network.
