

P2PS Token One-Pager

Global Problem:

Anything that you exchange digitally with anyone, anywhere, is not private by any privacy standards; including information exchanged on your “private” intranet corporate networks.

P2PS Purpose:

The purpose of our ICO is to bring to you a secure system through which you can exchange confidential digital assets or files with absolutely no interference from any third party; not even a network or systems administrator.

What Can P2PS Do That Others Don't?

P2PS is a pure peer-to-peer platform which safeguards, for example, your medical records, banking information and other sensitive digital assets, during exchange between two parties. Such platforms today are simply nonexistent.

Usage of P2PS Token:

The P2PS utility token is designed to be used by members within the P2PS platform. It primarily assists in transactions on the decentralized, secure and interference free, Peer-to-Peer Communication System platforms used in Government & Defense, Digital Education & Delivery, Medical & Pharma, Banking & Finance, and other corporate sectors. Subsequently, P2PS tokens will replace traditional licenses on other systems such as Electronic Learning Inc.'s educational system, Pan Excels eLearning solutions, among others.

Why P2PS Token?

When you purchase P2PS Tokens, you are contributing directly into the new economy that has been designed for your benefit. Please be advised that you are neither investing in a company nor in the creation of a company or corporation. We have crossed those stages and are offering P2PS utility token that you will eventually need if you prefer to use our secure, interference-free communications platform.

Procuring P2PS Tokens helps grow the economic ecosystem built around the secure, peer-to-peer, interference-free communications platform. You are helping build an extremely secure and strong network of interference-free communication systems with faster processing and a perpetual record of transactions. This process also streamlines financial actions into efficient and highly secure processes.

What Has Been Done So Far?

The secure, interference free, Peer-to-Peer Communication System platform's venture started in 2010 and has been self-funded to completion. In November 2017, we launched P2PS token and released the token in pre-ICO that is now an ongoing ICO.
